

# Find Out how to post on instagram from pc Through Third Party Apps And Bluestacks

Posting on Instagram from a PC is becoming increasingly popular, especially with businesses. It offers the same features as the mobile app, with the added convenience of being able to post from a larger screen, and with the help of a keyboard and mouse. Read on to find out [how to post on instagram from pc](#).

## How to Post to Instagram From Your Computer

In the past, posting on Instagram from a PC was difficult, but there are now a number of ways to do this. The most basic way is to use a third-party app such as Bluestacks or Nox App Player. These apps are designed to create a virtual Android environment on your PC, allowing you to access the Google Play Store, download the Instagram app, and use it just as you would on a mobile device.

Another option is to use Instagram's web version if you want to know how to post on instagram from pc. It can be accessed from any browser. This allows you to post photos and videos, but you won't be able to use some of the app's features such as Stories, direct messaging, and editing tools.

## Through third party apps

If you're looking for an even more comprehensive way to post on Instagram from a PC, you can use a third-party app such as Hootsuite or Later. These apps provide a range of

features, including the ability to post photos and videos from your computer, schedule posts in advance, monitor analytics, and much more.

To get started, you'll need to create an account with one of these third-party apps. Once you've set up your account, you can link it to your Instagram account and start posting.

While you are interested in how to post on Instagram from PC, you'll need to make sure that the photo or video you're posting is the correct size. Instagram has a recommended size for its photos and videos, so make sure you're resizing them correctly before posting.

Once you've posted your photo or video, you can add a caption and hashtags, tag other accounts, and choose where to post. You can also use the editing tools to make adjustments to your images, such as adding filters, cropping, and more.

## Using Bluestacks

Now that you know how to post on Instagram from PC by using third-party apps, let's find out how to do it using Bluestacks. Posting Instagram from a PC is not as straightforward as posting from a mobile device. But if you do it right, you will have no problem. Here are the steps to follow:

1. Download and install Bluestacks on your computer. Bluestacks is an Android emulator that allows you to access Android applications on a PC. Download it from the official website.
2. Once Bluestacks is installed, open it and search for the Instagram app. Download and install it.
3. Open the Instagram app and log in with your credentials.
4. Once you are logged in, click on the "+" sign to create a new post.
5. Now, select the photo that you want to post. You can upload photos from your PC or from other sources like Google Drive or Dropbox.
6. Once the photo is selected, you can add a caption, tag people, and add other details like location, etc.
7. You can also add filters, stickers, and other changes to the photo.
8. Finally, click on the "Share" button to post the photo to your Instagram account.

These are the steps to follow if you want to know how to post on Instagram from PC using Bluestacks.
